Education

Shanmugha Arts, Science, Technology and Research Academy (SASTRA) Thanjavur, Tamil Nadu
B.Tech. in Computer Science Engineering | CGPA: 8.41 Expected Aug 2028
Coursework: Data Structures, Algorithms, Object-Oriented Programming

Technical Skills

Languages: TypeScript, JavaScript, Java, Python, C++, SQL
Web and databases: Node.js, Express.js, Next.js, Django, HTML, CSS, MySQL
Systems: HTTP, concurrency, file I/O, SHA-256 hashing, content deduplication
Tools and testing: Git, Node.js test runner (node:test), HTTP integration testing, end-to-end testing
Cloud: AWS Lambda, DynamoDB, EventBridge Scheduler

Experience

Web Developer | Team 1nf1n1ty, Thanjavur Oct 2024 – Present

- Built and deployed the club's orientation website in HTML, CSS, and JavaScript. Gathered requirements from organizers and revised the responsive components after peer reviews.

Google Student Ambassador | Remote Aug 2025 – Jan 2026

- One of three ambassadors selected to represent SASTRA. Organized hands-on Gemini AI events for students and coordinated outreach with ambassadors at other universities.

Projects

Multi-Agent IT Helpdesk | Meta x Scaler AI Hackathon Repository

- Created an OpenEnv-compatible reinforcement learning environment in Python. LLM agents triage tickets and escalate unresolved cases through three support tiers (L1, L2, and L3).
- Scored routing decisions using SLA targets, resolution time, success, and escalation cost. Stored L3 fixes in a shared knowledge base so lower tiers could reuse them on repeat incidents.

Fault Lab | TypeScript, Node.js, Express

- Built an HTTP failure simulator that replays JSON scenarios. Each request gets its response step on arrival, so a later request can finish while an earlier one is delayed.
- Logged response times and disconnects in a live request view; added 11 automated tests for replay, concurrent requests, and resets during pending requests.

Checkpoint | TypeScript, Node.js

- Built a CLI to save and compare folder snapshots. SHA-256 hashes let snapshots reuse unchanged file contents, even when files are renamed.
- Verified file hashes and byte counts before restoring a snapshot into a new directory. Tested recovery, corrupted objects, and unsafe paths in 12 end-to-end tests.

Certifications

Google Cloud course certificates | Offered by SASTRA Deemed University

- Data Management and Storage in the Cloud
- Introduction to Data Analytics in Google Cloud
